Filing Date: February 11, 2002

Title: METHODS AND APPARATUS TO TEST COMPUTER SYSTEM COMPONENTS (as amended)

Assignee: Intel Corporation

IN THE CLAIMS

Page 3

Dkt: 884.616US1 (INTEL)

Please amend the claims as follows.

(Currently Amended) A method comprising:
starting a computer system comprising at least one component;
determining whether the at least one component has previously been successfully tested;
if not, testing the at least one component, and

otherwise, not testing the at least one component, wherein if the at least one component is successfully tested, permanently storing an indication that the at least one component has been successfully tested; and

wherein storing the indication is deferred until the computer system has successfully been started a predetermined number of times.

- 2. (Canceled)
- 3. (Currently Amended) The method recited in claim $\underline{1}$ [[2]], wherein the indication comprises a predetermined bit pattern.
- 4. (Original) The method recited in claim 3 wherein determining further comprises checking for the predetermined bit pattern.
- 5. (Original) The method recited in claim 4 and further comprising, if such predetermined bit pattern is present:

booting the computer system.

Filing Date: February 11, 2002

Title: METHODS AND APPARATUS TO TEST COMPUTER SYSTEM COMPONENTS (as amended)

Assignee: Intel Corporation

6. (Original) The method recited in claim 4 and further comprising, if such predetermined bit pattern is present:

determining whether a field test is ordered, and if so, testing the at least one component, and otherwise, booting the computer system.

- 7. (Original) The method recited in claim 6 and further comprising, after testing: determining whether the test was successful; and if so, providing an indication that the at least one component has been tested, and otherwise, providing an error indication.
- 8. (Currently Amended) The method recited in claim $\underline{1}$ [[2]] and further comprising after storing:

restarting the computer system.

9. (Original) The method recited in claim 1 and further comprising, if the at least one component is tested:

determining whether the test was successful, and if so, storing an indication that the at least one component has been tested, and otherwise, providing an error indication.

10. (Original) The method recited in claim 1 and further comprising, if the at least one component is not tested:

booting the computer system.

11. (Original) The method recited in claim 10, wherein booting comprises: initializing the at least one component; and

loading a portion of an operating system into memory.

Filing Date: February 11, 2002

Title: METHODS AND APPARATUS TO TEST COMPUTER SYSTEM COMPONENTS (as amended)

Assignee: Intel Corporation

12. (Original) The method recited in claim 1 wherein determining further comprises checking for the presence of a test to test the at least one component.

13. (Original) The method recited in claim 12 and further comprising, if such a test is not present:

booting the computer system.

- 14. (Original) The method recited in claim 12 wherein checking comprises checking for the presence of a predetermined bit pattern.
- 15. (Currently Amended) A computing device having at least one component and executing a computer program comprising the operations of:

upon receiving a command to start the computing device, determining whether the at least one component has previously been successfully tested; and

if not, testing the at least one component, and

otherwise, not testing the at least one component, wherein if the at least one component is successfully tested, permanently storing an indication that the at least one component has been successfully tested; and

wherein storing the indication is deferred until the computing device has successfully been started a predetermined number of times.

- 16. (Canceled)
- 17. (Currently Amended) The computing device recited in claim 15 [[16]] wherein the computer program further comprises the operation of:

after storing, restarting the computing device.

Serial Number: 10/073,546 Filing Date: February 11, 2002

Title: METHODS AND APPARATUS TO TEST COMPUTER SYSTEM COMPONENTS (as amended)

Assignee: Intel Corporation

(Original) The computing device recited in claim 15 wherein the computer program 18. further comprises the operation of:

if the at least one component is tested, determining whether the test was successful; and if so, storing an indication that the at least one component has been tested, and otherwise, providing an error indication.

Dkt: 884.616US1 (INTEL)

(Original) The computing device recited in claim 15 wherein the computer program 19. further comprises the operation of:

if the at least one component is not tested, booting the computing device.

- (Original) The computing device recited in claim 19 wherein, in booting, the at least one 20. component is initialized, and a portion of an operating system is loaded into memory.
- 21. (Original) The computing device recited in claim 15 wherein, in determining, a check is made for the presence of a test to test the at least one component.
- (Original) The computing device recited in claim 21 wherein the computer program 22. further comprises the operation of:

if such a test is not present, booting the computing device.

(Original) The computing device recited in claim 21 wherein, in checking, a check is 23. made for the presence of a predetermined bit pattern.

Title: METHODS AND APPARATUS TO TEST COMPUTER SYSTEM COMPONENTS (as amended)

Assignee: Intel Corporation

(Currently Amended) An article comprising a computational machine-accessible 24. medium having associated instructions, wherein the instructions, when accessed, result in a computational machine comprising at least one component performing:

upon receiving a command to start the machine, determining whether the at least one component has previously been successfully tested;

if not, testing the at least one component, and

otherwise, not testing the at least one component, wherein if the at least one component is successfully tested, permanently storing an indication that the at least one component has been successfully tested; and

wherein storing the indication is deferred until the machine has successfully been started a predetermined number of times.

- 25. (Canceled)
- (Currently Amended) The article of claim 24 [[25]] wherein the instructions, when 26. accessed, additionally result in the machine performing:

after storing, restarting the machine.

(Original) The article of claim 24 wherein the instructions, when accessed, additionally 27. result in the machine performing:

if the at least one component is tested, determining whether the test was successful; and if so, storing an indication that the at least one component has been tested, and otherwise, providing an error indication.

(Original) The article of claim 24 wherein the instructions, when accessed, additionally 28. result in the machine performing:

if the at least one component is not tested, booting the machine.

AMENDMENT UNDER 37 C.F.R. 1.116 - EXPEDITED PROCEDURE

Serial Number: 10/073,546

Filing Date: February 11, 2002

Title: METHODS AND APPARATUS TO TEST COMPUTER SYSTEM COMPONENTS (as amended)

Assignee: Intel Corporation

29. (Original) The article of claim 28 wherein the instructions, when accessed, additionally result in the machine performing:

in booting, the at least one component is initialized, and a portion of an operating system is loaded into memory.

30. (Original) The article of claim 24 wherein the instructions, when accessed, additionally result in the machine performing:

in determining, a check is made for the presence of a test to test the at least one component and, if such a test is not present, booting the machine.

31-33 (Canceled)
